VOLUME VII · DEFENSE TIER

# Defense Tier

Non-transferable. Export-control gated. This document exists to record the disposition of the defense tier and the control governing it, not to describe it.

---

DOCUMENT  NRH-DOC-VII-DEF-001 · rev B (expands rev A, 28 Jul 2026)
VERSION  1.1.0 · compiled 2026-11-10
CLASS  GATE · NON-TRANSFERABLE
CLEARANCE ITAR/EAR REVIEW NOT PERFORMED

**Handling control.** Do not transmit. Do not attach to email. Do not place in a shared drive, data room, or repository. Do not include in any investor, partner, or acquirer package. This document is deliberately content-free with respect to technical data; that is the control, not an oversight. If you are reading this and you are not the principal, it has already been mishandled.

# Section 1. Program register

Existence only. No architecture, capability, performance, or interface data. Naming a program is generally not export-controlled. Technical data about that program is. Everything below is a name and a disposition. Nothing below is technical data. That boundary is the entire reason this document can exist in written form at all.

| Program | Class | Disposition |
|---|---|---|
| SONA-X | Defense system program | GATED. No architecture disclosed in any distributable artifact. |
| SCADS | Defense system program | GATED. No architecture disclosed in any distributable artifact. |
| X-FORCE AQUA | Defense system program | GATED. No architecture disclosed in any distributable artifact. |
| edge-agent | Private repository | Export-control risk. Requires paid ITAR/EAR review before ANY release. No exceptions. |

# Section 2. Standing control and required action

**Standing rule, edge-agent.** edge-agent is PRIVATE. It carries identified export-control risk. It requires a paid ITAR/EAR review before any release, publication, demonstration, repository visibility change, data-room inclusion, or verbal technical description to any third party. This rule has no exceptions. It is not subject to commercial urgency, investor pressure, partnership timing, or founder discretion.

**Required action sequence.**

1. Retain counsel competent in ITAR and EAR. Not general corporate counsel. Specific export-control competence.
2. Obtain a written determination on classification for each of the four items in the register. Verbal comfort is worthless in this domain.
3. Confirm repository visibility settings and access logs for edge-agent. Determine whether any historical access constitutes a disclosure event.
4. Only after a written determination exists may any of this tier be described externally, valued, or included in a capability claim.

**Assessment, read this part twice.** The defense tier is currently carried as a liability line, not an asset line, and that is the correct treatment. An unreviewed export-control exposure does not become an asset by being impressive. It becomes an asset by being cleared. Until then it is an unpriced downside with no offsetting upside, the worst shape a position can take. There is a second, less obvious cost: the existence of an uncleared defense tier constrains what can be said about the rest of the estate, because adjacent technical description creates disclosure risk. The uncleared tier is taxing the cleared ones. The correct next action here is not a build action. It is a

legal expenditure. It is the one line item in this entire operation where spending money is unambiguously the highest-return move available, and it has not been spent.
